TiDi Hồ Trọng Đại Dai Ho Trong

Full-stack Developer

Profile

Officially a full-stack developer, though I spend most of my time on the backend: designing APIs, modeling data, connecting services, and making sure the infrastructure underneath them stays reliable.

Work experience

Sunbytes Full-stack Developer — 2024-03 to present
CyberRock

NFQ Asia Full-stack Developer — 2020-03 to 2024-03
Lemonswan, Quest, Scania

Projects

CyberRock Active

2024-03 to present

prove IoT devices are genuine

Role	Backend, auth, solution design
Team	8 people
Scale	13 services across Azure and AWS
Stack	NestJS microservices over NATS, PostgreSQL, Redis/BullMQ, React, Azure and AWS, GitHub Actions, Argo CD

What I built

- Challenge-response auth for security chips – token, host, mutual, daisy-chain and secure-boot attestation
- Chip lifecycle from manufacturing to the field, with supplier exports and a full audit trail
- Anomaly detection that turns geolocation jumps and slow responses into Slack-alerted incidents

botmivivi Side

2026-08 to present

back office for a flour distributor, live in production

Role	Built end to end
Users	10
Customers	646
Orders	2,951
in the first 2 months	
Impact	90% less time, 80% fewer errors
Stack	NestJS, Prisma, PostgreSQL, Redis/BullMQ, Vue 3

What it does

Debt ledger – every order, return and payment moves the balance in the same transaction

Price whitelist – off-list prices are flagged to Slack; customers can lock a price and prepay

Tonnage payroll – every kilo a loader moves prices itself, so payroll is a query

Quest @ NFQ Asia **Cleared**

2020-12 to 2024-03

a career-path platform on RPG quest mechanics

Role	Tech lead
Team	8 juniors
Users	~300 users in Ha Noi, Da Nang, Sai Gon, Can Tho
Stack	Node.js, Serverless framework, AWS Lambda, DynamoDB, S3, API Gateway, EventBridge, NestJS, Prisma, MySQL, ReactJS, VueJS, Google OAuth 2.0, Terraform, New Relic

Party lead – architecture calls, code reviews, cross-team work, agile timelines, and mentoring freshers and juniors.

Achievements unlocked

Clean Slate – v2 codebase and architecture from scratch with NestJS + Prisma

Five-Minute Window – DynamoDB → MySQL migration with ~5 min of downtime

Front Door – Google SSO built in, fewer third-party dependencies

No More ClickOps – Terraform for infrastructure, New Relic for monitoring

Lemonswan

NFQ Asia · 2020-03 to 2020-12

A dating platform in Germany for singles with serious intentions.

What I built	matching logic and UI design
Stack	Laravel 8.10, MySQL, Redis (cache), Tailwind CSS

lemonswan.com

Scania

NFQ Asia

An e-commerce platform selling trucks, built for a German company.

What I built	backend and frontend
Stack	Spryker framework

Skills

Main	TypeScript, Node.js, NestJS, React, Next.js, Vue 3
Data	PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, NATS, BullMQ
Ops	AWS, Azure, Docker, Kubernetes, Terraform, GitHub Actions, Argo CD, New Relic
Companions	Claude, ChatGPT
Alt builds	PHP, Laravel, Symfony, Python, Flask

Serverless framework, CI/CD, Git, Slack, Jira, Spryker framework

Education

Bachelor in Software Application Ho Chi Minh Vocational College 2017–2020

Bachelor in Business Administration Ton Duc Thang University 2013–2017

Languages

Vietnamese

English IELTS 6.0 · EF SET C1
